

Finding the right subset

How the Subset Browser is organized, and two ways to open a subset.

The Subset Browser at a glance

The screenshot shows the AdmissionCare Subset Browser interface. At the top, there's a search bar labeled 'Search for subsets...' with a magnifying glass icon. Below the search bar, the interface is organized into columns. The first column lists clinical categories with counts: General (5), Infectious Disease (11), and others. The second column shows subsets under 'Cardiovascular' (9) and 'Heart Failure' (3). The third column shows subsets under 'Neurology' (3), 'Pulmonary / Respiratory' (3), and 'Endocrine / Metabolic / Renal' (8). The fourth column shows subsets under 'Hematology / Oncology' (5) and 'Obstetrics / Women's Health' (4). A toggle for 'Adult' is visible in the top right corner.

- 1 Search bar.** Type a diagnosis, sign, or symptom to find matching subsets.
- 2 Clinical categories.** Subsets are grouped by body system or clinical issue. The number on each heading shows how many subsets it holds.
- 3 Subsets.** Click on the subset name to display the criteria.
- 4 Adult or pediatric.** Subsets default to Adult or Pediatric based on patient date of birth. Use the toggle in the top right to switch if needed.

Option 1: Browse the list

This screenshot shows the 'Cardiovascular' category selected, displaying a list of subsets: Acute Coronary Syndrome (ACS), Arrhythmia, Atrial, Arrhythmia, Blocks, Arrhythmia, Ventricular or Abnormal ECG Finding, Deep Vein Thrombosis, and Heart Failure. The 'Heart Failure' subset is highlighted with a green box.

- 1** Find the category for the body system or clinical issue, such as Cardiovascular or Infectious Disease.
- 2** Scan the subsets listed under that heading.
- 3** Click the subset name, for example Heart Failure, to open its criteria.

Option 2: Search by keyword

This screenshot shows the search bar with the text 'hea' entered. Below the search bar, a dropdown menu displays 'Results' and 'Heart Failure'. A link 'View All Subsets' is also visible.

- 1** Type the first 3 to 4 letters of a diagnosis, sign, or symptom in the search bar.
- 2** Matching subsets display, even if a word is misspelled.
- 3** Click a result to open that subset, or select View All Subsets to return to the full list.
